

REMARKS

The rejection of claims 1 and 4 under 35 USC 102(e) has been rendered moot by their cancellation and substitution of new claims 5 and 6.

Claims 5 and 6 are directed to a method for accessing a computer at a first location to view, create and/or transfer information to and from the computer using a video monitor, browser and keyboard processor unit at a second location remote from said first location. The video monitor may be a TV as specified in claim 6. This is consistent with the specification and the earlier amendments although the claims to date were directed to a system and not a method. It has been the consistent position of Applicant that the prior art does not teach a method or system for accessing a computer at a first location using a video monitor such as a TV at a second location remote from the computer with a Keyboard processing unit and keyboard at the second location for communicating with the remote computer by means of a wireless telephone communicating device and modem through the internet to view, create and/or transfer information to and from the computer while simultaneously displaying the information on the video monitor.

As a practical matter the intent of the subject invention was to permit one in a hotel room using a TV and a wireless connection to access a computer remotely located with the TV as the monitor for viewing data transferred through a Keyboard processing unit and keyboard from and to the computer.

The methodology of the subject invention has nothing to do with that taught in Howard '374 although Howard admittedly discloses hardware which possibly could be combined and rearranged to practice the method taught and claimed in the subject application. It is clearly not obvious from Howard to do so.

Clearly new claims 5 and 6 are patentable over Howard '374.

Reconsideration and allowance of claims 1 and 4 is respectfully solicited.

Respectfully submitted,

Eugene Lieberstein
Attorney for Applicant
Reg. No. 24645

CERTIFICATION OF MAILING

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to the Commissioner for Patents P. O. Box 1450 Alexandria VA 22313-1450 on March 16, 2004.

Claim 5 (new)

A method for accessing a computer at a first location to view, create and/or transfer information to and from the computer using a video monitor, browser and keyboard processor unit at a second location remote from said first location with the keyboard processor unit having an ASCII encoder and decoder for receiving and transmitting ASCII data and a keyboard comprising the steps of: using a wireless communicating device and modem at said second location to establish a wireless interconnection through said browser with the internet for communicating between the keyboard processing unit and the computer and using the keyboard to access and/or transfer information from and/or to the computer while simultaneously displaying such information on said video monitor.

Claim 6 (new)

A method as defined in claim 5 wherein said video monitor is a TV and wherein an RF modulator and an RF transmitter is used to transmit and receive information wirelessly between the keyboard processing unit and the TV video monitor.
